

Seed Sconce

Bec Brittain

Seed takes its name from seed crystals—the microscopic structures that catalyze the formation of larger crystalline systems.

Seed reimagines the natural as something structured and mineral—a rejection of the assumption that nature must be soft, flowing, or vegetal. The system's angular arms and engineered hardware mirror the internal logic of crystalline solids. And yet, within this order, there's space for surprise: the configurations introduce a playfulness and a rhythm that reflects the randomness inherent in how crystals grow.

Starting at: \$5,400

Leadtime: 14-16 Weeks

Shipping from New York
